

Project Design Phase-I Solution Architecture

Date	1 October 2022
Team ID	PNT2022TMID32605
Project Name	IoT based smart crop protection system for agriculture
Maximum Marks	4 Marks

Key points:

- * Arduino uno is used as a processing unit which processes the data obtained from sensors and weather data from weather API.
- * Node red is a programming tool to wire the hardware, software and APIs.
- * The MQTT protocol is followed for communication.
- * All the collected data are provided to the user through a mobile application which was developed.
